DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 29 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dennison (U.S. Pat. 5,362,666).

Dennison discloses the method for forming a container capacitor, comprising the steps of:

providing a cup-shaped bottom electrode 42 (cover Fig.);

providing an insulating layer 58 around an exterior surface of the cup-shaped bottom electrode (cover Fig);

depositing a dielectric layer 50 on part of the exterior surface (cover Fig.); and

depositing a conductive layer 52 on the dielectric layer (cover Fig., column 11, lines 4-12).

Dennison does not particularly point out the step of masking a first portion of the insulating layer and etching a second portion of the insulating layer from a part of the exterior surface. However since some masking must be performed to limit the area in which etching as shown in Figures 4-8, use of a mask is inherent in the process, and it would be obvious to use a mask to limit the etching. Note also that Dennison shows (Fig. 4) that layer 41 is photo resist which will function as a mask.

Response to Arguments

Applicant's arguments filed 9/10/2001 have been fully considered but they are not persuasive.

The applicant argues that masking a first portion of the insulating layer and etching the second portion of the insulating layer discloses by Dennison is not inherent in the process. However, Dennison discloses a method of fabricating a capacitor comprising a step of: resist 44 which is masking a portion of the insulating layer and etching the other portion of the insulating layer (Figs. 4-8, column 10, lines 35-50) to form a container capacitor.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
